Contents

1   Introduction

The Prestashop Module TrackPrestaPay allows you to send order tracking information to PayPal.
 Below you will find all the information you need to understand and use this module.

2   Requirements

The requirements needed to run the module on your system are:

- PrestaShop version 1.7.8 or higher

- PHP 7.4 or higher
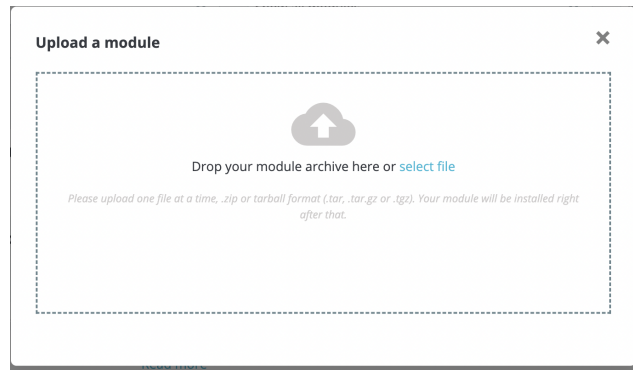

3   Module installation

After you have downloaded the module you will have a compressed zip. Open the administration panel of your store and go to the Module -> Module manager menu.

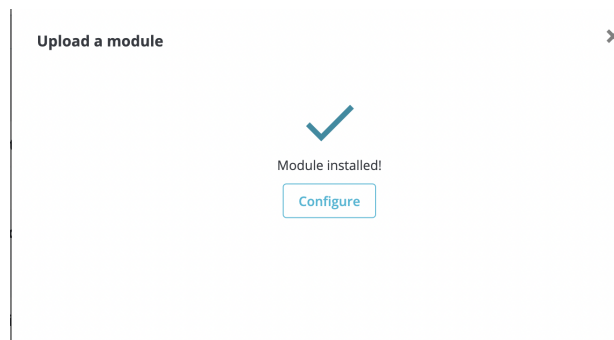

Click on the button located at the top right "Upload a module".

A panel will be opened where you can select the form file to be loaded. Click the "Choose a file" and select the zip file, exactly as downloaded from the store PrestaShop addons. Click on the button "Upload this module" and wait for the upload confirmation message.

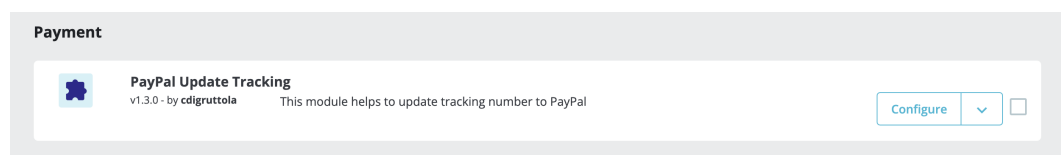

After the installation is finished (it takes very little time) it will return the successful installation message.

NB: If you have problems with the above mentioned steps, you may want to contact technical support using the appropriate section available in PrestaShop addons site.

4   Configuration

The module is configured by clicking on the "Configure" button accessible from the list of modules.

The following data can be configured here:

- module usage modes (SandBox for testing and Live in production).

- data to be used for the API, which you can generate here

- Payment modules using PayPal.

In the "Update Batch Orders" section, it is possible to perform a bulk update of orders in "Shipped" and "Delivered" status by indicating the reference dates.

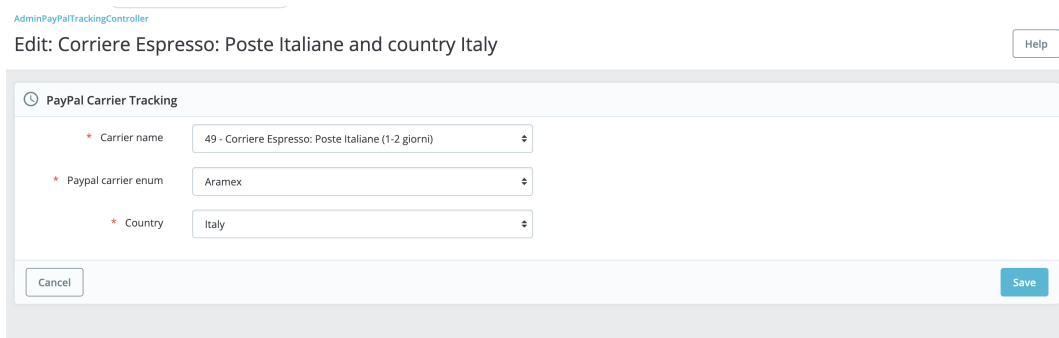

5 Configuration PayPal Carrier Tracking

In the "Payment -> PayPal Tracking" menu you can add, edit or remove associations between the Couriers configured on Prestashop and those of PayPal PayPal Carriers. NB: Should there be any discrepancies between what is listed and what is in the form, please contact our technical support using the appropriate section available on the PrestaShop store page.
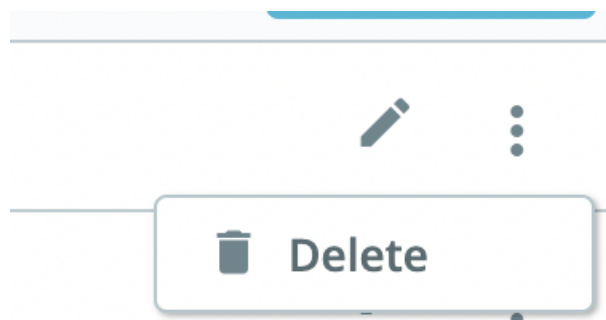

To add a new association between Prestashop Courier and PayPal Courier you need to click on the "Add new PayPal Carrier Tracking" button and fill out the form that appears.

To edit an object, click on the edit icon and change the information of the selected item.

To remove an object, you can use the menu that appears by clicking on the dotted line menu.

6   How module works

In case of "Update Batch Orders" the module retrieves all the order in "Shipped" and "Delivered", check if the module for the payment is one the modules the

use PayPal, retrieve the tracking number in OrderCarrier object and send to PayPal. The maximum size of the batch is 20, as suggested in PayPal doc, if the order numbers is greater the module does more call to PayPal in order to send all the orders.

The module also is hooked to actionObjectOrderCarrierUpdateAfter and actionObjectOrderUpdateAfter. In this case, when the tracking number is added to the order and when the order is shipped, the module automatically sends information to PayPal.
